SERVICES

HDVR is a multipurpose solution for hotels with on-premise PBX systems that need to quickly reestablish temporary connections and voice operations in the event of a disaster or other events that require a hotel to maintain their voice service. Remote hosted services can be provided during repairs, expansion or remodeling, relocation or even as a job-site PBX system for new construction and hotel operations. It's simple to implement and transparent to callers or users.

HDVR is a low cost solution when a hotel's PBX hardware or service connections are out of service for any reason.
