Pinnacle Installing Major Systems For New InterContinental Hotel Minneapolis - St. Paul Airport

InterContinental Hotel MSP Airport
5005 Glumack Dr
Minneapolis, MN

On-track to open this summer, the new dynamically-designed 12-story, 291 room luxury hotel will have its own direct TSA security connection to the airport and will feature a top-floor 'Observation Bar' where guests can sip cocktails while watching airplanes on take-off and landings. Designed to attract both leisure and business travelers and uniquely positioned as the only hotel connected to the airport, the property provides direct access by light rail or its own access road and dedicated parking. The 32,400 square feet of meeting space can be configured into a ballroom or up to 19 separate meeting rooms plus additional separate meeting registration areas. In addition to three on-site restaurants, luxury spa and fitness center the hotel is only five minutes from The Mall of America.

Pinnacle is installing IHG's proprietary GIA High-Speed Internet Access that utilizes the Cisco/Meraki platform plus ComXchange PBX by 360 Networks and Vtech SIP telephones for guestrooms, admin and common areas. Everything will operate on a GPON fiber network directly connected to each guestroom. "This is a 'Top-End' installation, says Tom Larson, Pinnacle National Account Manager who secured the project, we're taking the fiber network to each guestroom and installing SIP telephones, that's not something you see every day. Everything is above average and it's going to be a really special hotel."

"It's so great to see this level of hotel being newly constructed, says Pinnacle CEO/VP Cloud Solutions, Bill Mitchell, our industry is on the move and here's one more example of our expanding growth profile into the future. It's an exciting time for us and for the business environment in general."
